

## ABSTRACT

A stackable display case including a window, a display shelf, and a case body divided into a forward display area and a rear storage area. The display shelf is sloped to provide a better view of the displayed item. The forward display compartment and rear storage compartment are preferably separated by a compartment panel which is preferably a removable mirror. The packaging that the collectible was sold in can be stored behind and above the display shelf and may be viewed through the window by removing the compartment panel. Side wall mirrors alongside the display shelf facilitate viewing of the displayed item from the sides.
